

FOR IMMEDIATE RELEASE – May 18, 2015

US Patent Portfolio For Rechargeable Battery Technology Developed by Tel Aviv University to Be Sold by Munich Innovation Group

Munich, Germany (May 18, 2015) – Munich Innovation announces the availability of a US patent portfolio relating to rechargeable batteries.

These two granted US patents cover rechargeable batteries, protecting a setup with an anode coated with a solid-electrolyte interface (SEI), a method for making such a battery by coating the anode prior assembly (artificial SEI), and a cathode also protected by an SEI.

Typical embodiments of these patents are lithium-ion batteries with an increased reversible capacity thanks to an artificial anode SEI and a more durable cathode that operates at higher temperatures and offers a higher cycle life.

Both patents are mature, having been filed in 1996 and 1999. At that time, fundamental technologies of nowadays ubiquitous lithium-ion batteries were developed. This is reflected in 73 forward citations the two patents have collected over the years, with 11 recent citations from 2014 highlighting their current importance.

“We believe that these mature US patents form valuable IP assets for companies manufacturing secondary cells”, says Dr. Stefan Taing, Senior Partner of Munich Innovation, “Thanks to their widespread adoption in today’s battery technology, they represent a great potential for IP risk mitigation”.

Munich Innovation will shortly be approaching potential buyers of the patent portfolio with a detailed technology report and will be available to discuss the intellectual property in more detail.

About Munich Innovation Group

Munich Innovation Group GmbH is a leading service provider for intellectual property monetization and research on a global scale. Clients include publicly listed high-tech corporates, privately held companies, independent inventors, academic institutions and investors. The company offers IP licensing management, patent transactions and IP advisory services.
